

PROFILING SYSTEM FOR SANGGUNIANG KABATAAN AND KATIPUNAN NG KABATAAN WITH RADIO FREQUENCY IDENTIFICATION (RFID)

List of System Modules

MODULE NAME	DESCRIPTION/FUNCTION
PROFILING MODULE	This module serves as the foundational component of the system, tasked with the comprehensive management of user data involving both Sangguniang Kabataan (SK) Officials and Katipunan ng Kabataan (KK) Members. It facilitates the registration, modification, and validation of personal and demographic information, including full name, birthdate, contact details, barangay affiliation, and assigned roles. The system incorporates Radio Frequency Identification (RFID) technology to assign unique identifiers to KK Members, ensuring accurate tracking of individual participation and attendance. Additionally, administrative oversight is enforced by role-based access controls, preventing data inconsistency and promoting transparency. This module aims to uphold data integrity, streamline member profiling, and enhance accountability within the SK structure.
COMMUNITY BULLETIN MODULE	The Community Bulletin Module functions as a centralized announcement and information dissemination platform, designed to bridge the communication gap between youth constituents and governing SK bodies. Through this module, Panlungsod na Pederasyon and SK Officials are enabled to post verified announcements, public advisories, call-to-action posts, and urgent notifications. Content is dynamically categorized and filtered according to barangay affiliation or youth sector classification to ensure relevance and accessibility. KK Members are notified in real-time and may access a history of bulletins to stay informed about ongoing programs, policy changes, and local initiatives. This feature promotes participatory governance, fosters community awareness, and ensures the timely delivery of credible information.
EVENT SCHEDULING MODULE	This module allows designated SK and city-level officials to create, organize, and manage events across various barangays, ranging from youth summits and outreach activities to clean-up drives and livelihood programs. It provides functionalities to input event metadata such as title, description, venue, date, time, and target participants. The system also supports pre-registration for KK Members, enabling them to confirm attendance intentions in advance. Through built-in scheduling tools and automated reminders, the module enhances coordination efficiency,

	prevents scheduling conflicts, and supports inclusive youth engagement. Moreover, this module links seamlessly with Attendance Monitoring and Analytics, allowing for seamless data integration and post-event evaluation.
ATTENDANCE MONITORING MODULE	The Attendance Monitoring Module is designed to log and track youth participation across all scheduled events through the integration of RFID-based scanning and manual verification protocols. Each scanned entry is time-stamped and recorded in the system, which helps identify attendance behavior, punctuality, and consistency of participation among KK members. SK Officials are given access to sortable and filterable logs which can be exported for evaluation and benchmarking. The system also generates visual summaries and attendance trend reports, enabling decision-makers to identify active members, reward engagement, and address lapses in participation. This module not only enhances operational efficiency but also supports evidence-based evaluation of SK-led initiatives.
DOCUMENT STORAGE MODULE	This module serves as a secure repository for storing and organizing documents pertinent to SK operations, including but not limited to program proposals, financial reports, accomplishment records, ordinances, resolutions, and certificates of participation. Role-based permission settings govern the upload, download, edit, and view capabilities of users. KK Members are granted access only to documents shared with their respective barangay or participation group, while SK Officials and Panlungsod na Pederasyon have extended privileges. The module supports document versioning, audit logs, and categorization to maintain traceability and foster a culture of transparency and accountability. It reinforces good governance practices by digitizing and archiving official communications in a structured manner.
ANALYTICS MODULE	The Analytics Module is an intelligent reporting tool designed to assist youth leaders and administrators in generating data-driven insights from the system's integrated modules. It consolidates event participation, attendance history, member engagement, and system usage into interactive charts and downloadable reports. Filters allow segmentation based on barangay, age group, gender, and participation frequency, thereby aiding in the formulation of more inclusive and targeted programs. KK Members can also view personal dashboards reflecting their individual contributions. For SK and City-level Officers, these analytics support performance evaluations, budget justifications, and long-term strategic planning. Ultimately,

	this module enhances organizational learning and policy formulation through empirical evidence.
